

DRAGANFLY

remotely controlled
mini helicopter
with onboard
wireless camera

If you have ever wanted to relax on your couch and fly a machine that looks like it came out of a James Bond movie, congratulations!

We've just found it for you!

Draganfly Innovations Inc. provides people like yourself with the most innovative flying machines that can be operated indoors or at your local park. This is the future of remote control. On the DraganFly web page (www.rctoys.com), you will see many unique flying objects and we are proud to make them available to you.

Simply put, the Draganflyer IV gyro-stabilized helicopter with optional Eyecam video system is the highest tech flying toy in the world.

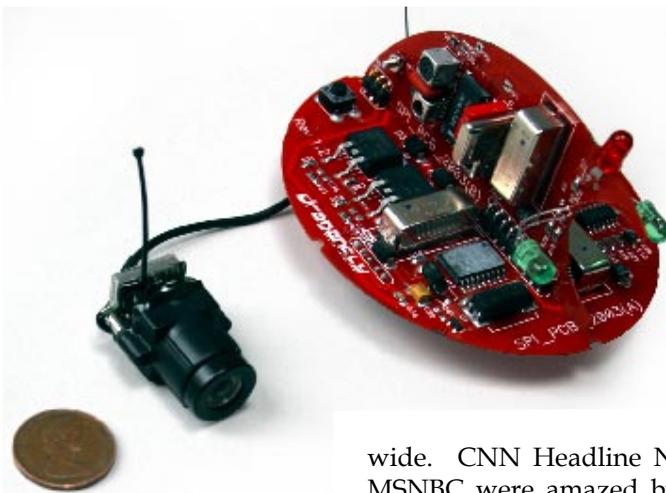

We're sure you will agree that Radio Controlled helicopters are complicated and difficult to fly, but

the Draganflyer is different. The Draganflyer's advanced electric circuitry has eliminated over 95% of the necessary parts that make a conventional helicopter fly. Assembly time is only about thirty minutes, and couldn't be easier. It's a rare thing to find a product that is so technologically advanced that it's actually easy. The three state-of-the-art piezo gyros incorporated in each Draganflyer add a new dimension to flying Radio Controlled helicopters by making our helicopter easier to fly.

The Draganflyer IV comes with everything you need to fly - a complete package.

Don't let the small size fool you. At only 28 inches in diameter, the Draganflyer IV has achieved the perfect balance between form and function. The ultra lightweight carbon fibre body and beautiful lines of our helicopter make it a flying masterpiece. The unique electronic control system is beautifully designed and enables our helicopter to be much easier to fly and fun to master. You'll have complete control over yaw, pitch, and roll - absolutely full aerial manoeuvrability. Let your imagination soar! Make every spot a launch pad for excitement. You will eventually be able to touch-and-go off the coffee table, fly through a doorway, and land in your hand. If you wish to venture outdoors, the Draganflyer's range is only limited by your eyesight. Sounds incredible? It is.

If you are thinking of buying a petrol helicopter or a different electric helicopter, re-assess your options. The Draganflyer has a minimal number of parts - unlike the other helicopter designs. This means when you crash (everyone does) the Draganflyer, there are fewer parts to break. The body is virtually indestructible because it is constructed with carbon fibre and super tough nylon.

We've crashed gas helicopters causing over \$400 in damage, and this is not uncommon. When you crash a petrol helicopter the rotors usually tear the helicopter apart (Ouch!) because of their mass and size. Our newly redesigned rotors are efficient, safe, and are inexpensive to replace.

The Draganflyer has been featured on "Ripley's Believe it or Not," Space Channel, Apple.com, Tech TV, and New York Times. NASA has even purchased this helicopter for research along with many universities world-

wide. CNN Headline News, History Channel, Discovery Channel, and MSNBC were amazed by the Draganflyer's aerial camera abilities. The combination of quality, agility, and ease of use make the Draganflyer a news-worthy product.

We now have a wireless color micro-video camera, the Eyecam, that mounts onto the Draganflyer and sends an excellent quality video signal to a small, portable base station. From here the video can be watched on a TV, recorded onto VHS by a VCR, or recorded to a digital video camera. The Draganflyer is truly your 'eye in the sky' system, and is very new, very cool, and very revolutionary. Yes, now you can make aerial videos! The possibilities are endless with a video camera attached to one of the world's most innovative flying machines. Videotape real estate, promotional videos, dangerous situations, or hard to reach locations to make money on the side!

If you have always wanted the coolest toy on the block, now is the right time to make your purchase of the all-new Draganflyer IV. For a limited time we are promoting the new 2.4GHz Eyecam color video camera that mounts to the frame of the Draganflyer for only US\$149.95 extra - a US\$200 savings bundle!

Order one today. You won't regret it! [•]
