latest news from the world of CCTV

Net-Security organised a Digital and Networking Seminar in Adelaide

Photos by John Gerhardy

The interest about the new seminars that Vlado Damjanovski and his company CCTV Labs are conducting, based on his new book "CCTV - Digital and Networking Technology," have grown considerably. His simple to understand explanation of even the very complex CCTV concepts and technologies, which are in the same style as the explanations in his popular book, attract world-wide interest, so that it is not a surprise that CCTV Labs has scheduled for other parts of the world, starting from Russia, through Europe to the US.

On 21 September, Net-Security from Adelaide decided to officially open their new premises at 4 Commercial Street at Marleston in Adelaide, with a full day training seminar "Digital and Networking in CCTV", based on Vlado Damjanovski new book.

Impeccably organised by Net-Security in their new and modern office, accompanied with a full breakfast and lunch, fresh coffee and teas throughout the day, this event attracted more than 34 attendants, some of which even flew from Darwin and Alice Springs.

This was nice gathering of colleagues and competitors, all under one roof, thirsty for knowledge, keeping up the Australia's image of a country with the best developed CCTV know-how.

The seminar started with a full breakfast at 8:30 and finished at around 5 PM in a relaxed conversation with a beer or glass of nice South Australian wine.

The presentation was intense and full with information and explanation on various compressions and technologies and networking. A complete and yet easy to follow

Power Point presentation was accompanied by connecting to remote DVR sites and checking image quality of various compressions. Vlado started his presentation with a short but very important summary of the PAL analogue CCTV basics, and the day ended up with CCTV image quality measurements and testing procedures.

Many questions asked by the attendants proved that they were really in tune with presentation and absorbing all the knowledge that Vlado was passing on.

Furthermore, the attendants proved that South Australia and Northern Territories CCTV industries offer fertile ground for many businesses and

projects in these states.

Each attendant received a CD with a copy of the presentation, a complete set of the all "CCTV focus" magazines in electronic format, some very useful CCTV tools, a certificate of attendants and a free one year subscription to this magazine.

Everybody left with high impressions and expressed desires for more regular seminars in the near future on similar and new topics that might arise in our ever-developing CCTV technology. [•]
